

In house development guarantees best quality

- We have more than 10 years development experience in the Automotive Electronics sector
- Development of all our products is carried out by in house engineers
- All our products are manufactured in house – Made in Germany
- We are quick and flexible with the adaptation of new technology
- Only the highest quality is accepted in house

Always up-to-date

Since 1994 when Euroscan was founded we have become the world's leading manufacturer of high-quality temperature recorders for the whole transport sector.

Our development department is staffed by highly qualified engineers, with many years of experience in the design and development of both Hardware and Software of Automotive electronics. Creative ideas help us to develop innovative products and solutions to the latest state of the art technology.

Ameriscan Temperature recorders are tested and certified to comply with all current and proposed regulations, this will allow your staff to have full confidence when using any of our Ameriscan products.

With the extensive market knowledge available in the Ameriscan organisation, an international sales team and continuing verification of the regulations in countries all over the world, Ameriscan makes for an attractive company, who are usually able to fulfill all customer requirements.

With our own in house production, we are able to control and guarantee the quality of all Ameriscan products. It also allows us to be as flexible as possible when having to react on any new challenge which is presented to us, with the minimum of delay.

To be in the picture, in time – Transparency in The Cold Chain

Quality management and quality assurance are nowadays issues of utmost importance for all companies. The installation of suitable products to monitor and store information on the conditions during transportation, has become increasingly necessary.

Our challenge continues to be the increased requirement for specific analytical methods, for the control of all transport parameters which are important for the quality of the goods.

Ameriscan accepts this challenge and aims to always supply the correct products at the right time.

Controlled Cold for all Goods

- Food
- Electronic Parts
- Chemicals
- Pharmaceuticals
- Flowers
- Transport of Live Animals

Perfect Control by Documentation

Regardless of the products being transported, whether it be Food, Medicaments, Electronic parts, etc., all parties involved during the shipment as well as the end customer, must insist that optimal conditions are always being maintained.

Americscan will give you the correct means of support so that you can always prove the correct conditions have been maintained.

New ways of monitoring and data transfer helps you to ensure better quality management and enables you to have the right tools, allowing you to prove that you kept to all Industry guidelines, as well as all national and international regulations.

Together with Americscan, you will ensure that the customer always receives his goods in good condition and with top class quality.

With Ameriscan, Visions Come True

- Worldwide leading manufacturer of system solutions for Temperature measurement
- Representation throughout the World
- Many years of market experience
- In-house development and production

Aiming at highest quality

More than 10 years of development experience in the area of electronic products for the automotive and transport industry, guarantees first class quality of our products. State of the art, modular system solutions give us the possibility to offer you high quality products for numerous different applications. Whether your fleet is big or small, we always have a solution on hand which will meet all your requirements.

Flexible solutions provided by in house production

In house production enables us to adapt quickly to new laws and guidelines. The advantage for you, is that you are always on the safe side, not only when keeping to latest regulations for the transport of refrigerated products, but also to supply the corresponding documentation.

Many years of development and production of temperature recorders and associated electronics have made us the real experts in this field. This experience is fully utilized when planning new products. We therefore anticipate modifications and try to be always one step ahead of the requirements.
